14	Dr.APJ Abdul Kalam	Dr.D.V.Kurmude	Highest marks in Physics in B.Sc.III yr.

## Organic farming in the college campus

Our college has largest green land in the Aurangabad city. The lush green college campus is not only popular with students who came here to study but is also a popular destination for nature lovers. The faculty members and students of the college are dedicating time to greener premises and sustainable consumption. The college management decided to start an organic farming project in the campus. Organic farming is a method of crop and livestock production that involves much more than choosing not to use pesticides, fertilizers, genetically modified organisms, antibiotics and growth hormones. The academic hubs are making an effort to convert barren land on their premises in patches where organic farming is being practiced as well as encouraging students to take part in the activity. Faculties and students of the college, whether in group or individually dedicate five to six hours of the week to farming. The college has 3 acres of land which is used for organic farming activity. This activity to be an escape from regular college life. There is no compulsion to do work in the farm for students and faculties. A person can dedicate whatever time possible for him or her. The students are being taught how to grow their own food as well as live in less polluting environment organic vegetables will also help improve their health and reward the body with better immune system in the long run.

The following crops are grown in the farm: Maize, Groundnut, chili, Mango, Amala, Guava, Pomegrante, Fenugreek, Tomato, Brinjal, Drumstick.

Hence we have successfully practiced this activity in the college campus, where we have successfully converted barren land into food producing zone.

Principal Dr. Mohmad Shafique, and students are working in the farm
